

Using Paragon Micro Fibre Cloths

general purpose cloths:

Is used dry for removing dust and loose particles from all hard surfaces. As it is wiped over a surface it creates a static charge that attracts dirt to the cloth, the micro fibre then 'holds' the dirt until the cloth is washed.

Is used damp to remove heavier soilings from all hard surfaces. The micro fibres work through capillary action, drawing dirt into the cloth. Once the cloth is dirty, place in laundry bag and continue cleaning with a clean cloth.

where to use:

All hard surfaces including, plastic, aluminium, wood, laminate, ceramics, tiling, stainless steel, glass, Perspex, paintwork, vinyl etc.
